

Free OEMC Seminar: Fundamentals of New Construction Commissioning

Finding Answers to Your Questions

What is building commissioning? Why is commissioning necessary for new construction projects? What are the costs and benefits?

Commissioning is a process where building systems are verified to meet both the design intent and owner's operational requirements. The process includes activities in the design, construction, acceptance, and warranty phases of the building delivery process as well as day to day operations.

Commissioning provides robust quality assurance for the owners, the design team, the occupants, and the facility and maintenance staff to ensure a fully functional building. While the use of commissioning is growing rapidly for all types of buildings, it is still a misunderstood process.

Seminar: Fundamentals of New Construction Commissioning

We invite you to attend a three-hour seminar on commissioning for new construction projects. The seminar is offered at no cost to attendees. Seminar materials and refreshments will be provided.

The seminar is conducted by Architectural Energy Corporation and sponsored by a grant from the Governor's Office of Energy Management and Conservation.

Learn the Ins, Outs, Ups, and Downs

The seminar includes three key components:

- Introductory presentation explores the purpose and process of commissioning, as well as tools and techniques for specific commissioning testing activities.
- Case studies present facts, problems, and solutions from commissioning projects involving K-12 schools, office buildings, and other building types.
- Panel discussion features local owners, commissioning providers, engineers, and contractors discussing various issues.

Three dates – three locations:

Same great seminar conducted on three separate dates and in three different locations:

- Colorado Springs, May 11, 2006
- Denver-area, Westminster, June 8, 2006
- Fort Collins, June 22, 2006

Locations and times are provided on next page.
